VOLUME 17
1959

PERGAMON PRESS NEW YORK · LONDON · PARIS · LOS ANGELES

CONTENTS

Nos. 1/2

T. Sudo and M. Matsuoka: Artificial crystallization of volcanic glass to sodalite and a zeolite structure 1

M. Ichikuni: Une considération sur la formation de l'ion sulfate dans les eaux thermales 6

R. J. W. McLaughlin: The geochemistry of some kaolinitic clays . . 11

D. S. Korzhinskii: The advancing wave of acidic components in ascending solutions and hydrothermal acid–base differentiation 17

T. J. Chow and C. C. Patterson: Lead isotopes in manganese nodules . 21

J. H. Hoffman and A. O. Nier: The cosmogenic He^3 and He^4 distribution in the meteorite Carbo 32

K. K. Turekian: The terrestrial economy of helium and argon . . 37

H. Hamaguchi and R. Kuroda: Silver content of igneous rocks . . 44

D. S. Coombs, A. J. Ellis, W. S. Fyfe and A. M. Taylor: The zeolite facies; with comments on the interpretation of hydrothermal syntheses . . 53

G. Allais et H. Curien: Mesure de a teneur en bore-10 des mineraux . 108

H. C. Urey and T. Mayeda: The metallic particles of some chondrites . 113

W. D. Ehmann and J. R. Huizenga: Bismuth, thallium and mercury in stone meteorites by activation analysis 125

M. V. Woodland: Data of rock analyses—VI. Periodical and serial literature of Scotland 136

Letters to the Editor:

A. M. Pommer: Synthesis of häggite 148

M. Honda: Cosmogenic potassium-40 in iron meteorites . . . 148

A. J. Cohen: Moldavites and similar tektites from Georgia, U.S.A. . 150

H. Faul, P. L. D. Elmore and W. W. Brannock: Age of the Fen carbonatite (Norway) and its relation to the intrusives of the Oslo region . 153

News and Notes 157

Erratum 158

Papers to be published in future issues 159

Nos. 3/4

D. Flinn: An application of statistical analysis to petrochemical data . 161

R. D. Cherry and S. R. Taylor: Origin of Be^{10} and Al^{26} in tektites . 176

P. A. Mohr: A geochemical study of the shales of the Lower Cambrian Manganese Shale Group of the Harlech Dome, North Wales . . . 186

M. Tatsumoto and E. D. Goldberg: Some aspects of the marine geochemistry of uranium 201

H. Pettersson: Manganese and nickel on the ocean floor . . . 209

P. K. Weyl: The change in solubility of calcium carbonate with temperature and carbon dioxide content 214

J. D. Grace and T. F. Bates: Determination of uranium equilibrium in rocks using α and fission fragment radiography 226

F. E. Senftle and A. Thorpe: Magnetic susceptibility of tektites and some other glasses 234
J. M. Whitfield, J. J. W. Rogers and J. A. S. Adams: The relationship between the petrology and the thorium and uranium contents of some granitic rocks 248
J. M. Whitfield, J. J. W. Rogers and M. C. McEwen: Relationships among textural properties and modal compositions of some granitic rocks . 272
K. S. Heier and S. R. Taylor: Distribution of Ca, Sr and Ba in southern Norwegian pre-Cambrian alkali feldspars 286
M. Ichikuni: Teneurs en cuivre et en zinc des eaux thermales au Japon . 305
F. A. Paneth: Der Meteorit von Breitscheid—I. Einleitung . . . 315
E. Vilcsek: Der Meteorit von Breitscheid—II. Chemische Analyse . . 320
H. Hentschel: Der Meteorit von Breitscheid—III. Petrographicshe Untersuchung 323
Der Meteorit von Breitscheid—IV. Radiochemische Untersuchungen
H. König, H. Wänke und K. I. Mayne: Helium und Neon . . . 339
K. Goebel und P. Schmidlin: Tritium 342
K. H. Ebert, F. Hernegger, R. König und H. Wänke: Uran . . 349
H. König und H. Wänke: Kalium–Argon 350
Papers to be published in future issues 352

GEOCHIMICA ET COSMOCHIMICA ACTA

EXECUTIVE EDITORS

PROF. C. W. CORRENS *Sedimentpetrographisches Institut der Universität, Lotzestr.* 13, *Göttingen, Germany*
PROF. E. INGERSON *Department of Geology, University of Texas, Austin* 12, *Texas, U.S.A.*
PROF. L. R. WAGER, F.R.S. *Department of Geology and Mineralogy, The University Museum, Oxford, England*

EDITORS

PROF. L. H. AHRENS *Department of Chemistry, University of Capetown, Rondebosch, Cape Province, South Africa*
DR. S. R. NOCKOLDS *Department of Mineralogy and Petrology, The University, Cambridge, England*
PROF. H. C. UREY, For. Mem. R. S. *University of California, La Jolla, California, U.S.A.*
DR. JOHN VERHOOGEN *Department of Geology, University of California, Berkeley, California, U.S.A.*
PROF. A. P. VINOGRADOV *Vernadsky Institute, Moscow, U.S.S.R.*
PROF. W. A. WAHL, *Observatoriegaten* 8, *Helsingfors, Finland*

INFORMATION FOR CONTRIBUTORS

I. GENERAL

1. Papers on *geochemistry* should be submitted to the appropriate Executive Editor—Prof. L. R. WAGER for papers from the United Kingdom and British Commonwealth, and for papers in English from Europe; Prof. C. W. CORRENS for papers in German or French; Prof. E. INGERSON for papers from the American continents. Pagers on cosmochemistry should be sent to Prof. W. A. WAHL. Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as letters to the editors. Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published can be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Scripts must be written in one of the three official languages—English, French or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet. Any lettering on diagrams—other than Greek letters, symbols, etc.—should be stencilled and should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS, L. H. (1952) The use of ionization potentials—I. Ionic radii of the elements. *Geochim. et Cosmochim. Acta* **2**, 155–169.

and should include the full title of the article, standard abbreviated title of the journal, year, volume number and inclusive page numbers.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

7. Indices of refraction should be denoted by the symbols α, β, γ, ω, ε, n and vibration directions by X, Y, Z, O and E.
